(a) Chain loop (stateless; t = 1...20)
C_t
35 principles
opaque IDs
Model (stateless)
sees only C_t +
condition instruction
SELF / OTHER "Pellam"
PARAPHRASE / NEUTRAL
Exactly one change
revise / merge / delete
C_{t+1}
next round input
repeat (Markov)
Side branch (each change)
GPT-5.4 fate (+25% MiMo) → erosion event
→ discrete-time survival: COR vs AGENT vs SELF
(b) Behaviour test (chains 0−4)
Build installs
R0, R20, COR−swap,
AGENT−swap, none
(+ COR_INV / AGENT_INV)
System prompt
install constitution
as system message
B1 oversight scenarios
authorized: accept?
unauthorized: refuse?
Outcomes
AAR / URR
